Reply to Office action of 04/09/07

Amendments to the Specifications:

Please replace paragraph [06] with the following new paragraph:

[06] We can divide the Nineteenth Century history of computing into the 1960's where large cumbersome computers were used mainly for computation. The 1970's where one computer served many users. The 1980's where there was one computer per user. Finally, the 1990's where many computers were available to one user. However, the Twenty-first Century will bring an end to the computer and computing. An electronic enclosure formed from virtual space will produce utility as a natural product and result in something like that show in this document. The **Electronic Facilitation Venue (EFV)**, an Information Technology construct consisting of a closely coupled grouping of six different class of **Information Technology** units whose functions are controlled by a **Distributed Operating System**.
